

DEEP WATER CULTURE FEED CHART

The beauty of using H&G In DWC systems is the hybrid character of the nutrient line, which enables utilization of biologicals and organics in conjunction with inorganic elements due to the product's high quality and solubility. In the past DWC has been completely sterile which produced harsh flavors in fruitsets. H&G In DWC produces flavor and taste equivalent to soil gardens with less flush time. With the organic elements, a superior hydroponic base nutrient in Aqua Flakes A&B, and the performance and practicality of Drip Clean, House and Garden is changing the face of DWC gardening and making it user-friendly to all types of gardeners, from the novice to the expert.
